

Active Fedora - ToDo # 202: Fix Solr Schema to correctly provision for vanilla search

Status:	Closed	Priority:	Normal
Author:	Matt Zumwalt	Category:	Search/Solr
Created:	03/05/2009	Assigned to:	McClain Looney
Updated:	07/16/2009	Due date:	
Subject:	Fix Solr Schema to correctly provision for vanilla search		
Description:	See docs info on vanilla search in [[active-fedora:Notes_on_Solr_usage]]. * Update schema.xml in ActiveFedora distro (and in disk image) to include copyfield element that copies _field content into "text" field. * Test that you can actually use "text" field for vanilla search. * update docs accordingly

seems to work. uploading new image now...

note: new image is compressed dmg, which is readonly. attach with "hdiutil attach <image name> -shadow

this will create an overlay filesystem, allowing you to "write" to the image. the data actually gets written to the .shadow file (which you'll find next to the dmg). To "reset" the image, just delete the shadow file, et voila!

(will update wiki)
