

Active Fedora - Feature # 753: Configurable Solr Field Names

Status:	Closed	Priority:	Normal
Author:	Matt Zumwalt	Category:	Search/Solr
Created:	01/28/2010	Assigned to:	Matt Zumwalt
Updated:	03/10/2010	Due date:	
Sponsor:	Stanford		
Subject:	Configurable Solr Field Names		
Description:	Rather than using hard-coded suffixes, rely on field name mappings from a yaml file. Provide default yaml file based on existing ActiveFedora mappings. Also provide recommended mappings for basic interoperability with Blacklight (so Blacklight and ActiveFedora can share a solr index)
